Vetropole™ Glass Pillar

Vetropole™ Glass Pillars are festivities and beauty of stars rolled up in a glass pillar. They are really beautiful to look at. They are being used as decorative pillars in homes, halls, cafes, lounges, malls, balconies, restaurants, clubs, weddings, etc. You can decorate ceilings with it. Use it as a vertical support pillar on stairs, put it outdoors in the gardens and light it with colourful lights to jazz up your garden parties. A coloured LED light is placed on the top or bottom of the pillar, which points light in a vertical direction, and the bubbles that are inside are then lit up with the colour of the light.

A lot of technique goes into making solid bubble glass pillars. The tiny bubbles that are seen in the glass pillar give an impression of bubbles suspended in a liquid. When lit the effect is breath taking. They add the glamour quotient to your surroundings. Bring the Vetropole™ pillars home and install them for a festive look with coloured lights. They are sturdy, eco-friendly, recyclable, and can be maintained for years with minimum fuss.

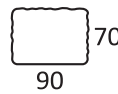

Vetropole™ Glass Pillars can be customized into any length. The ends of the pillars are smoothed and polished, for transparency to conduct light beautifully. They are broadly categorized as Vetropole™ Wave & Vetropole™ Shine.

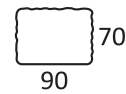

Vetropole™ Wave

Vetropole™ Wave Pillars are uniquely designed with a water flow wave effect on the back surface. The wavy texture continues to the two sides which gives it a 3D look. It gives a very soothing effect due to the combination of the bubbles inside the glass and the wave on the back and side surfaces. The front of the pillar is clear without any texture. The four edges of the pillars are rounded.
